The phenol oxidising enzyme is capable of modifying t colour associated with dyes or coloured compounds, and can be use for pulp and paper bleaching, for bleaching the colour of stains fabric and for anti-dye transfer in detergent and textile applications. It may also be capable of modifying the colour in the absence or presence of an enhancer. Expression vectors and host cells comprising a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and methods for constructing expression hosts are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detergent composition comprising novel phenol oxidising enzyme obtained from fungus or bacteria, useful for pulp and paper bleaching, bleaching color of stains on fabric and for anti-dye redeposition -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 8; Fig 10; 45pp; English.

Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to the Stachybotrys chartarum DNA (AAA51313) are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or coloured compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wang
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Curvularia pallescens phenol

RESULT :
The present invention describes a detergent composition containing purified phenol oxidising enzyme derived from Stachybotrys. The presequence represents Stachybotrys chartarum phenol oxidising enzyme enzyme can be used to modify the colour of dyes and other coloured compounds (e.g. for use in pulp and paper bleaching also for removerable, e.g. food, tea, blood etc., from fabrics) and for preventing the presentation of the preventing that the preventing the prevention the preventing the preventing the prevention the prevention the prevention that the prevention the prev

The invention is used to modify a coloured compound and prevent dye transfer during fabric washing, or for stain bleaching or anti-dye transfer. It is useful in the detergent, paper and pulp, textile and food industries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel enzyme for modifying dye-transfer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1999-591088/50.

The present sequence is that of a phenol oxidising enzyme of Stachybotrys chartarum MUCL 38898. A claimed detergent composition comprises a phenol oxidising enzyme having at least 60% identity to the present sequence, and preferably obtained from a bacterium, yeast or non-Stachybotrys fungus, especially Bipolarius spicifera, C Curvularia pallescens or Amerosporium atrum (see AAY95538-40). The phenol oxidising enzyme is capable of modifying the colour associated with dyes or coloured compounds, and can be used for pulp and paper bleaching, for bleaching the colour of stains on the absence or presence of an enhancer. Expression vectors and the absence or presence of an enhancer. Expression vectors and the absence or presence of an enhancer. Expression vectors and constructing a nucleic acid encoding a phenol oxidising enzyme, methods for producing the phenol oxidising enzyme, and the constructing expression hosts are provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

Phenol oxidizing enzymes encoded by nucleic acid sequences which hybridize to the coding DNA are claimed, as long as the enzyme is capable of modifying the colour associated with dyes or coloured compounds. The enzymes are useful in detergent compositions and for modifying colors associated with dyes or colored compounds which occur in stains in a sample. The enzymes are also useful for pulp and paper bleaching, anti-dye transfer in detergent and other textile applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New phenol oxidizing enzyme for modifying colors associated with or colored compounds, is obtained from fungus and is encoded by a nucleic acid comprising a specific nucleotide sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                evrG
M. carbonacea everninomicin biosynthetic pathway resistance gene product is useful for selecting for a transfected or transformed host cell. An integrative version of the vector is useful for introducing a everninomicin pathway gene (a bottle-neck gene) into an actinomycete of the genus Micromonospora. The DNA encoding the biosynthetic proteins is useful for synthesising novel everninomicin-related compounds, arising
                                                                                                                                                                       The sequence represents a Tailoring gene product, an oxidase, evrg. The protein comprises one of 98 enzymes of the everninomicin antibiotic biosynthetic pathway. A vector comprising
                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecules encoding everninomicin pathway gene products, useful for improving yields of everninomicin, to proeverninomicin and as probes to identify homologous sequences -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Everninomicin; antibiotic; bottle-neck gene; orthomicin;

The encoded polypeptides are useful for combinatorial biosynthesis to generate libraries of orthomycins, e.g. everninomicin analogues/homologues and drug discovery. The DNA encoding the integrates allows for increasing a given gene dosage. The integrative vector can be used to permanently integrate copies of a heterologous gene of choice into chromosomes of different hosts and to integrate genes which increase the yield of known products or to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 novel products such as hybrid antibiotics or other novel secondary metabolites. The vector can also be used to integrate antibiotic resistance genes in order to carry out bioconversions with compounds to which the strain is normally sensitive and is thus useful in fermentation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              processes involving e.g. Streptomyces antibioticus

polyketide or enzyme. The amino acids produced can be lysine, glutamine, glutamate, alanine, aspartate, glycine, serine, threonine, methionine, cysteine, valine, leucine, isoleune, arginine, proline, histidine, tyrosine, phenylalanine, or tryptophan. The fine chemical production can be modulated. The presence of (I) or HA proteins encoded by then are used for diagnosing the presence or activity of Corynebacterium

Arch. Biochem. Biophys. 211:55-65(1981).

-i. FUNCTION: CATALYZES THE LAST BUT TWO STEPS IN THE PUTATIVE BIOSYNTHETIC PATHWAY OF ACTINOMYCIN.

-i. CATALYZES THE LAST BUT TWO STEPS IN THE PUTATIVE BIOSYNTHETIC ACTIVITY: 4 4-methyl-3-hydroxyanthraniloyl pentapeptide + 3 O(2) - 2 actinomycinic acid + 6 H(2)O.

-i. COPACTOR: THIS PROTEIN BELONGS TO THE MULTICOPPER OXIDASES WHICH CONTAIN THREE DISTINCT CU CENTERS KNOWN AS TYPE 1 OR BLUE, TYPE 2 OR NORMAL, AND TYPE 3 OR COUPLED BINUCLEAR (BY SIMILARITY).

-i. SUBUNIT: HOMODIMER (SMALL FORM) OR HOMOHEXAMER (LARGE FORM).

-i. SIMILARITY: BELONGS TO THE FAMILY OF MULTICOPPER OXIDASES.

-i. SIMILARITY: CONTAINS 2 PLASTOCYANIN-LIKE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Q53692;
